

Digital Literacy Project Report

Name: Devdarsh Shyju

Reg No: 25MEI10057

Branch: Integrated M Tech CSE (Cyber Security)

University: VIT Bhopal

Course Code: CSE0001

Date: 30-03-2026

Introduction

This project focuses on developing essential digital literacy skills required for students in today's technology-driven world. As a Student Digital Ambassador, the aim was to understand and apply various aspects of digital tools, online communication, professional presence, and cyber safety. Through this project, I created an infographic to spread awareness, built a digital portfolio across multiple platforms, explored coding and collaboration tools, practiced professional email etiquette, and studied cybercrime awareness.

Each task provided practical exposure and helped me understand how to use digital platforms responsibly and effectively. This project has enhanced my ability to communicate professionally, stay safe online, and build a strong digital identity, which will be beneficial for my academic and future career growth.

TASK 1 WRITE-UP

For this task, I created a digital literacy infographic using Canva. The infographic was designed to help students understand the importance of digital literacy in a simple and visual manner. It included key topics such as the definition of digital literacy, useful digital tools for students, safe internet practices, and basic email etiquette. I used icons, colors, and short bullet points to make the content visually appealing and easy to understand.

One of the most interesting aspects of this task was learning how to present information creatively using design tools. However, I also found it slightly challenging to organize all the information neatly without overcrowding the design. This task helped me understand how visuals can effectively communicate important concepts and made me more confident in using design platforms for academic purposes.

TASK 2 WRITE-UP

For this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle to build a professional digital presence. GitHub is a platform used for storing and managing code, where I created a profile README to introduce myself and showcase my learning goals. LinkedIn is a professional networking platform that helps students connect with others and explore career opportunities, and I added my educational details to make my profile complete. Kaggle is a platform for data science and machine learning, which I plan to explore in the future.

Over the next four years, I plan to use GitHub to upload my projects and track my progress, LinkedIn to build connections and find internships, and Kaggle to improve my analytical and problem-solving skills. These platforms will help me grow both academically and professionally.

TASK 3 WRITE-UP

In this task, I explored coding and collaboration platforms by using CodeChef and Google Forms. On CodeChef, I solved a beginner-level problem, which helped me understand the basics of coding and problem-solving. It also gave me an idea of how competitive programming platforms work and how they can be used to improve programming skills.

For the collaboration part, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions. This helped me understand how to collect responses and analyze data using digital tools. I also explored how responses can be automatically stored in a spreadsheet, making it easier to manage information.

Overall, this task helped me gain practical experience with online tools that are useful for academics, collaboration, and skill development.

TASK 4 WRITE-UP

In this task, I learned the importance of professional communication through email etiquette. Poorly written emails can create misunderstandings and may leave a negative impression. For example, if a student sends an email without a proper subject line, greeting, or respectful tone, the message may be ignored or misunderstood.

This situation can be improved by using clear subject lines, maintaining a polite tone, and structuring the email properly with a greeting and closing. Being concise and respectful helps in effective communication. This task helped me understand how important it is to communicate professionally in academic and professional settings.

TASK 5 WRITE-UP

While working on this task, I was surprised by how common and easy online payment frauds have become. I realized that even a small mistake, such as clicking an unknown link or sharing sensitive information, can lead to serious consequences. This made me more aware of the risks involved in using digital platforms.

As a result, I will be more cautious while making online transactions and will avoid sharing personal or financial information with unknown sources. I will also verify the authenticity of messages and calls before taking any action. This task helped me understand the importance of staying alert and practicing safe online behavior.

Conclusion

This project helped me understand the importance of digital literacy in both academic and professional life. I learned how to use various digital platforms effectively, communicate professionally, and stay safe online. It also improved my awareness of cyber threats and responsible online behavior. Overall, this project has helped me build a strong foundation for my digital journey.
